Technical Information Report

AAMI TIR67: 2018

Promoting safe practices pertaining to the use of sterilant and disinfectant chemicals in health care facilities

Promoting safe practices pertaining to the use of sterilant and disinfectant chemicals in health care facilities

Approved 23 February 2018 by Association for the Advancement of Medical Instrumentation

Abstract: This technical information report (TIR) provides additional guidance to sterile processing managers

and others regarding compliance with occupational safety and environmental regulations.

Keywords: disinfectant, EPA, OSHA, preventing exposure, regulation, risk, safety, standard, statute, sterilant

AAMI Technical Information Report

A technical information report (TIR) is a publication of the Association for the Advancement of Medical Instrumentation (AAMI) Standards Board that addresses a particular aspect of medical technology.

Although the material presented in a TIR may need further evaluation by experts, releasing the information is valuable because the industry and the professions have an immediate need for it.

A TIR differs markedly from a standard or recommended practice, and readers should understand the differences between these documents.

Standards and recommended practices are subject to a formal process of committee approval, public review, and resolution of all comments. This process of consensus is supervised by the AAMI Standards Board and, in the case of American National Standards, by the American National Standards Institute.

A TIR is not subject to the same formal approval process as a standard. However, a TIR is approved for distribution by a technical committee and the AAMI Standards Board.

Another difference is that, although both standards and TIRs are periodically reviewed, a standard must be acted on—reaffirmed, revised, or withdrawn—and the action formally approved usually every five years but at least every 10 years. For a TIR, AAMI consults with a technical committee about five years after the publication date (and periodically thereafter) for guidance on whether the document is still useful—that is, to check that the information is relevant or of historical value. If the information is not useful, the TIR is removed from circulation.

A TIR may be developed because it is more responsive to underlying safety or performance issues than a standard or recommended practice, or because achieving consensus is extremely difficult or unlikely. Unlike a standard, a TIR permits the inclusion of differing viewpoints on technical issues.

CAUTION NOTICE: This AAMI TIR may be revised or withdrawn at any time. Because it addresses a rapidly evolving field or technology, readers are cautioned to ensure that they have also considered information that may be more recent than this document.

All standards, recommended practices, technical information reports, and other types of technical documents developed by AAMI are *voluntary*, and their application is solely within the discretion and professional judgment of the user of the document. Occasionally, voluntary technical documents are adopted by government regulatory agencies or procurement authorities, in which case the adopting agency is responsible for enforcement of its rules and regulations.

Comments on this technical information report are invited and should be sent to AAMI, Attn: Standards Department, 4301 N. Fairfax Drive, Suite 301, Arlington, VA 22203-1633.

Chemical Sterilants Hospital Practices Working Group

This technical information report was developed by the AAMI Chemical Sterilants Hospital Practices Working Group under the auspices of the AAMI Sterilization Standards Committee. Approval of the TIR does not necessarily mean that all working group members voted for its approval. At the time this TIR was published, the **AAMI Chemical Sterilants Hospital Practices Working Group** had the following members:

Chair: Janet Prust

Members: Anas Aljabo, SteriPro Canada Inc

Nola Baves, Sanford Health

Marcia Benedict, STERIS Corporation Jon Burdach, PhD, Nanosonics Limited

Jennifer Burrell, St. Luke's Hospital and Health Network

Xiaolan Chen, Johnson & Johnson

Nancy Chobin, RN, CSPDM, Sterile Processing University LLC

Ramona Conner, RN, MSN, CNOR, FAAN, Association of periOperative Registered Nurses

Jacqueline Daley

Mary Ann Drosnock, Healthmark Industries Company Inc

Gordon Ely, MiMedx Group Gloria Frost, Cardinal Health

Zory Glaser, PhD, Johns Hopkins University School of Public Health

Rachel Hill, Becton Dickinson & Company

Nupur Jain, Intuitive Surgical Inc

Susan G. Klacik, CCSMC, FCS, ACE, International Association of Healthcare Central Service

Materiel Management

Doug Kruger

Jean-Luc Lemyre, TSO3 Inc

Stacey MacArthur

Jo Ann Maltais, Maltais Consulting

Jason Marosi

Elaine Mayhall, PhD, FDA/CDRH

Candace McManus, PhD

Astrid Merrifield, Boston Scientific Corporation

Rusty Mills, GE Healthcare

Frank Myers, UC San Diego Healthcare System

Richard Ormsbee, Cantel Inc

Alpa Patel, Nelson Laboratories LLC

Janet Prust, 3M Healthcare

Cheron Rojo, Valley Children's Hospital Mandy Ryan, Stryker Instruments Division Mike Schoene, Bausch & Lomb Inc

Rose Seavey, Seavey Healthcare Consulting, LLC

Frank Sizemore, Wake Forest University Baptist Medical Center

Foreword

This technical information report (TIR) was developed by the AAMI Chemical Sterilants Hospital Practices Working group under the auspices of the AAMI Sterilization Standards Committee. The objective of this TIR is to provide comprehensive background information on the U.S. federal regulations and industrial hygiene recommendations related to occupational exposure to chemical sterilants used in the health care setting for reprocessing medical devices.

Federal occupational safety laws are broadly written for all industries. This TIR focuses specifically on chemical sterilants used in the health care setting and the aspects of the regulations that apply. This document is not intended to interpret federal law and health care facilities should use this information only as background education to become familiar with the requirements. Health care facilities should not make legal decisions based the information in this TIR but refer to facility employee health and legal counsel. The content and recommendations in this TIR will be reviewed and updated periodically as requirements for occupational safety related to the use of chemical sterilants change.

The objective of this TIR is to assist health care management and personnel who use sterilant and disinfectant chemicals to improve occupational safety by providing relevant regulatory and general advice about safe use of these chemicals.

Suggestions for improving this TIR are invited. Comments and suggested revisions should be sent to Technical Programs, AAMI, 4301 N. Fairfax Dr., Suite 301, Arlington VA 22203-1633.

NOTE—This foreword does not contain provisions of AAMI TIR67, *Promoting safe practices pertaining to the use of sterilant and disinfectant chemicals in health care facilities*, but it does provide important information about the development and intended use of the document.
