Preface xii

Chapter 1 Use of Local Exhaust and Dilution Ventilation 1

Dilution Versus Local Exhaust 1 Dilution Ventilation 1 Local Exhaust Ventilation 1 Using Ventilation Effectively 2 Other Uses of Ventilation 2 Comfort 2 Material Control and Reuse 2 Community Environmental Protection 3 Other Exposure Control Techniques 3 Source Control 3 Exposure Pathway Modifications 3 Other Steps to Reduce Exposures 4 When Are Controls Needed? 5 Minimizing Exposures 5 Dilution Ventilation Systems 6 Dilution, Not Removal 6 Natural Ventilation 6 Mechanical Ventilation 7 Evaluating the Feasibility of Dilution Ventilation 7 Adjusting "Theoretical" Dilution Calculations for Workplace Conditions 7 Dilution Ventilation System Layout 8 Other Factors Affecting the "K" Value 8 Calculating Dilution Airflow for Health Protection 8 Dilution Ventilation for Health-Steady-state 9 Dilution Ventilation for Health—Concentration Buildup 10 Dilution Ventilation for Health—Purging 10 Dilution Airflow Design Data 11 Calculating Dilution Airflow for Fire and Explosion Prevention 11 Air Density Adjustments Due to High Temperatures 11 Summary 12 References 12

Chapter 2 Indoor Air Pollution: Ventilation as a Source and Solution 13

Background 13 HVAC System Objectives 13 Characteristics of IAQ Episodes 14 Typical Contaminants 14 Carbon Monoxide 14 Organic Vapors 14 Respirable Particulate Matter 15 Airborne Microorganisms 16 Radon and Its Progeny 16

Carbon Dioxide 16 Humidity 16 Control Techniques 16 Evaluating the Problem 17 What Are Acceptable Ventilation Rates? 17 Measuring Building Ventilation Rates 18 Airflow Measurements 18 Tracer Techniques 20 Air Motion is Important to Comfort 21 HVAC Systems 22 Zoned Systems 22 Single vs. Dual Duct Systems 22 Constant Flow vs. Variable Air Volume (VAV) Systems 23 Other Factors 23 Ventilation Solutions 23 HVAC System Adjustments and Modifications 23 Localized Exhaust Systems 24 Air Cleaners 24 Air Disinfection 25 Summary 25 References 25

Chapter 3 OSHA Ventilation Standards 27

Purpose of Ventilation Standards 27 Health Standards 28 General Exposure Standards 28 Substance-specific Health Standards 30 Permit-required Confined Spaces 30 Occupational Exposure to Hazardous Chemicals in Laboratories 31 Abrasive Blasting 31 Grinding, Polishing, and Buffing 32 Open Surface Tanks 33 Welding, Cutting, and Brazing 37 Fire/Explosion Ventilation Standards 38 Spray Finishing 39 Hydrogen 41 Oxygen 41 Flammable and Combustible Liquids 41 Summary 42 References 42

Chapter 4 Hazard Assessment 43

Identifying the Contaminant 43 Allowable Exposure Limits 44 Source and Duration of Exposure 45 Measuring Airborne Contaminants 45 Sampling Guidelines 46 Sampling Techniques 47 Sampling Time 49 Calculating Exposures 49 Compare Exposure to Allowable Limits 50 Summary 50 References 51

Chapter 5 How Local Exhaust Systems Work 53

Pressure Is the Key 54 Pressure Represents Energy 54 Units of Pressure 54 The Two Types of Pressure 55 Static Pressure 56 Total Pressure 56 Velocity Pressure 56 Pressure Losses as Air Enters the System 58 Acceleration Loss 58 Hood Entry Loss 58 Hood Static Pressure 60 Pressure Losses in the Ducts 61 Friction Losses 61 Turbulence Losses 62 Hood Entry Loss Coefficient (F_d or F_s) 59 Calculating Hood Entry Loss 59 Duct Enlargements 62 Abrupt Enlargement 63 Gradual Enlargements 63 Contractions 63 Elbows 64 Branch Ducts Entering Main Ducts 64 Other Losses 65 Pressure Losses Summarized 66 Pressure Loss Distributes Air 66 Fan Adds Energy to System 66 Summary 67 References 67

Chapter 6 Hood Selection and Design 69

Hood Types 70 Hood Selection Guidelines 72 Minimize Airflow Requirements 72 Protect Worker's Breathing Zone 73 Follow Design Criteria 73 Make the Hood Usable 73 Avoid Common Misunderstandings 73 Applying Selection Guidelines 74 Airborne Contaminants 75 Controlling Airborne Contaminants 78 Hood Design Principles 78 Capturing Hoods 79 Two Key Items: Velocity & Distribution 81 Capture Velocity 81 Velocity Distribution 82 The Problem of Limited Control 85 Crossdrafts Disrupt Capturing Hoods 86

Enclosures 87 Face Velocity Is the Key 88 Beware of Hot Processes 89 Receiving Hoods 89 Summary 91 References 92

Chapter 7 Air Cleaner Selection 93

Is an Air Cleaner Needed? 93 Exhaust Gas Characteristics 94 Identifying Contaminants and Estimating Levels 94 Existing Ventilation System 94 New Ventilation System for Existing Operations 94 New Exhaust System for New Operation 95 Air-cleaning Devices 95 Particulate Removal 96 Filters 96 **Electrostatic Precipitators** 98 Cyclones 99 Wet Scrubbers 100 Scrubber Designs 101 Mist Eliminators 102 Gas/Vapor Removal 102 Absorption 102 Adsorption 102 Adsorbents 103 Using Activated Carbon 103 Oxidation or Combustion 104 Summary 105 References 105

Chapter 8 Ventilation System Design 107

Design Overview 107 Design Information 108 Hood Information 108 Duct Design Data 108 Minimum Duct Velocity 109 Friction Loss 109 Elbow Losses 110 Branch Entry Loss 111 Exhaust Stacks 112 Air Density Corrections 112 Fan Size 112 Design Aids 113 Calculation Worksheet 113 Cross-sectional Area of Ducts 115 Single-Hood System 115 Sample Design 1: Welding Bench System 115 Multiple-Hood Systems 119 Blast Gate Design 121 Sample Design 2: Pedestal Grinder System-Blast Gate Design 121 Balanced Design (No Blast Gates or Dampers) 126 Methods of Balancing a Junction 126 Increasing Volume to Balance Airflow 127 Redesigning Ducts to Balance Airflow 127 Sample Design 3: Pedestal Grinder System-Balanced Design 127 Sample Design 4: "Modified" Pedestal Grinder System-Balanced Design 131 Design Procedure Summary 133 Make-Up Air 134 Supplying Make-Up Air 134 Recirculation of Exhausted Air 134 Choosing Stack Height and Location to Minimize Re-Entry 135 Summary 136 References 136

Chapter 9 Fans 137

Fan and System Curves 137 Exhaust System Curve 137 Fan Curve 138 Static Pressure Curve 138 Brake Horsepower Curve 139 Mechanical Efficiency Curve 139 **Operating Point 139** Fan Rating Tables 140 Caution: Fan Rating Data 140 Air Density 140 Poor Fan Inlet Connections 144 Poor Fan Outlet Connections Reduce Static Regain 145 Static Regain 145 Exhaust Stacks 146 Choosing the Proper Fan 147 Centrifugal Fans 147 Radial Blade Fans 147 Forward Curved Blade Fans 148 Backward Inclined/Backward Curved Blade Fans 148 Airfoil Fans 149 Axial Fans 149 Propeller Fans 150 Tube Axial Fans 150 Vane Axial Fans 150 Fan Noise 151 Turbulent vs. Mechanical Noise 151 Turbulent Noise Solutions 152 Fan Laws Govern Operation 153 Three Key Laws 153 Is the Fan Working Properly? 154 Summary 154

Chapter 10 Ventilation for High-Toxicity or High-Nuisance Contaminants 155 Zero Exposure Standards 155

High-Nuisance Materials 156 Hood Design 156

Receiving Hoods 156 Capturing Hoods 157 Enclosures 158 **Designing Enclosures 158** Glove Box Enclosures 159 Air Cleaner 160 High Efficiency Particulate Air (HEPA) Filters 161 Removing Gases and Vapors 161 Multiple Air Cleaners 162 Different Air Cleaners in Series 162 Identical Air Cleaners in Series 162 Parallel Air Cleaners 162 System Design Features 162 Fans and Ducts 162 **Operating Interlocks** 162 Instrumentation 163 Contaminant Sensors 163 Velocity and Pressure Indicators 163 Summary 163 References 163

Chapter 11 Saving Ventilation Dollars 165

Ventilation Cost Factors 165 Reducing Airflow Saves Money 165 Reducing Costs in Existing Systems 165 Eliminate Unneeded Ventilation 166 Modify Process 166 Replace Dilution Ventilation with Local Exhaust 166 Correct Poor Fan Inlets 166 Manage the Energy Needed to Temper Replacement Air 167 Designing New Systems to Save Money 167 Reduce Airflow 168 Reduce Airflow Resistance 168 Long Runs of Narrow Ducts 168 Locate Fan Near High Suction Ducts 169 Balance Capital and Operating Costs 169 Systems with Varying Airflow 171 Fan Inlet Dampers 172 Fan Speed Controls 172 Saving on Maintenance 173 Calculating Cost Factors 174 Duct Costs 174 Fan Costs 175 Air Cleaner Costs 176 Power Costs 176 Heating and Cooling Make-Up Air 177 Heating Costs 177 Cooling Costs 177 Summary 178 References 178

Chapter 12 Testing 179

Hood Testing Techniques 180
Smoke Tube Tracer Tests 180
Hood Velocity Measurements 181
Hood Static Pressure (Volume) Tests 182
Measuring Hood Static Pressure 183
Pitot Tube Duct Velocity Measurements 184
Pitot Traverse 184
Pitot Tube Detects Spinning Flow 187
System Static Pressure Tests 188
Testing Fan Performance 189
Periodic Maintenance Checks 192
Summary 192
References 192

Chapter 13 Solving Ventilation System Problems 193

First Step: Diagnosis 193 Maintenance Problems 194 Hood Problems 194 Capturing Hoods 194 **Enclosures** 195 **Receiving Hoods 195** Solving Hood Problems 195 Duct Problems 196 Path of Greatest Resistance 197 Main Ducts 198 Fan Inlet and Outlet Ducts 199 Air Cleaner Resistance 199 Exhaust Stacks 199 Fan Modifications or Replacement 199 Increasing Fan Speed 199 Replacing the Fan 201 Dividing the System 202 Adding a Second Fan 202 Noise Problems 203 Reducing Turbulence Noise Transmission 203 Reducing Mechanical Noise Transmission 204 Summary 204 References 204

Appendices 205

A: Symbols, Subscripts and Abbreviations 205B: Glossary 208C: Heating and Cooling Degree Days 212

Index 217

Calculation Worksheet—Inside Back Cover

List of Tables

- 1-1 Toxicity Guidelines for Dilution Ventilation 8
- 1-2 Factors for Calculating Dilution Ventilation Airflow 9
- 2-1 Typical Indoor Contaminants in Office and Commercial Buildings 15
- 2-2 Summary of Control Strategies for Indoor Contaminants 17
- 2-3 Characteristics of Sulfur Hexafluoride (SF_6) 20
- 2-4 Typical HVAC System Inspection Items 24
- 3-1 Standards for 13 OSHA Carcinogens 30
- 3-2 Typical OSHA Hazard Classifications for Open Surface Tank Operations 34
- 3-3 Federal OSHA Local Exhaust Requirements for General Welding and Cutting 37
- 3-4 Vapor Volume and LEL of Solvents 40
- 4-1 Sources of Contaminants 44
- 4-2 Air Sampling Guidelines 46
- 4-3 Air Sampling Techniques 48
- 5-1 Experimental Constants and Exponents for Duct Friction Loss Equation 62
- 5-2 Typical Pressure Losses from Air Cleaners 66
- 5-3 Ventilation System Pressure Losses 66
- 6-1 Hood Selection Guidelines 72
- 6-2 Types of Air Contaminants 76
- 6-3 Horizontal Stopping Distance and Settling Time for Sawdust 76
- 6-4 Air Sampler Sizing Characteristics for Size-Selective TLVs® 78
- 6-5 Range of Capture Velocities 82
- 7-1 Characterizing Contaminants for Air Cleaner Selection 94
- 7-2 Welding Fume Generation Rates 95
- 7-3 Particulate Air-Cleaning Devices 96
- 7-4 Baghouse Fabric Selection 98
- 7-5 Scrubber Pressure Drop vs. Collection Efficiency 100
- 7-6 Coefficients for Calculating Carbon Service Life (Equation 7.1) 104

- 8-1 Overview of Local Exhaust System Components 107
- 8-2 Design Information: Input and Output 108
- 8-3 Hood Entry Loss for Typical Hood Types 108
- 8-4 Typical Minimum Duct Transport Velocities 109
- 8-5 Friction Loss Factors for Galvanized Sheet Metal Ducts 110
- 8-6 Duct Area for Standard Diameter Ducts 116
- 8-7 Relative Advantages and Disadvantages of the "Balanced Design" and "Blast Gate" Methods 121
- 9-1 Air Density Correction Factors (Altitude and Temperature) 143
- 9-2 Comparison of Centrifugal Fans 147
- 9-3 Significant Noise Sources for Centrifugal Fans 152
- 9-4 Fan Laws 154
- 10-1 OSHA Definitions of Systems for Certain Carcinogens 156
- 10-2 Ventilation for Grinding, Buffing and Polishing 157
- 10-3 OSHA Hazard Potential Rating for Open Surface Tanks 158
- 11-1 System Cost Factors Compared with Airflow and Resistance 175
- 11-2 Approximate Heat Available from Fuels 177
- 12-1 Reasons for Testing Ventilation Systems 179
- 12-2 Round Duct 6-Point Pitot Traverse Locations 185
- 12-3 Round Duct 10-Point Pitot Traverse Locations 186
- 12-4 Safety Precautions for Fan Testing 189
