

ANSI/AWWA **D103-19**  
(Revision of *ANSI/AWWA D103-09*)

AWWA Standard

# Factory-Coated Bolted Carbon Steel Tanks for Water Storage

**Effective date: Jan. 1, 2020.**

First edition approved by Board of Directors Jan. 28, 1980.

This edition approved June 7, 2019.

Approved by American National Standards Institute June 11, 2019.

American Water Works  
Association

## AWWA Standard

This document is an American Water Works Association (AWWA) standard. It is not a specification. AWWA standards describe minimum requirements and do not contain all of the engineering and administrative information normally contained in specifications. The AWWA standards usually contain options that must be evaluated by the user of the standard. Until each optional feature is specified by the user, the product or service is not fully defined. AWWA publication of a standard does not constitute endorsement of any product or product type, nor does AWWA test, certify, or approve any product. The use of AWWA standards is entirely voluntary. This standard does not supersede or take precedence over or displace any applicable law, regulation, or code of any governmental authority. AWWA standards are intended to represent a consensus of the water industry that the product described will provide satisfactory service. When AWWA revises or withdraws this standard, an official notice of action will be placed in the Official Notice section of *Journal AWWA*. The action becomes effective on the first day of the month following the month of *Journal AWWA* publication of the official notice.

## American National Standard

An American National Standard implies a consensus of those substantially concerned with its scope and provisions. An American National Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American National Standard does not in any respect preclude anyone, whether that person has approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard. American National Standards are subject to periodic review, and users are cautioned to obtain the latest editions. Producers of goods made in conformity with an American National Standard are encouraged to state on their own responsibility in advertising and promotional materials or on tags or labels that the goods are produced in conformity with particular American National Standards.

**CAUTION NOTICE:** The American National Standards Institute (ANSI) approval date on the front cover of this standard indicates completion of the ANSI approval process. This American National Standard may be revised or withdrawn at any time. ANSI procedures require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of ANSI approval. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute, 25 West 43rd Street, Fourth Floor, New York, NY 10036; 212.642.4900; or e-mailing [info@ansi.org](mailto:info@ansi.org).

## Committee Personnel

The D103 Revision Task Force, which developed this standard, had the following personnel at the time:

Richard Austin, *Chair*

R. Austin, Brown and Caldwell, Irvine, Calif.  
J.E. Marquez, Superior Tank Company Inc., Rancho Cucamonga, Calif.  
K. McGuire, CST Industries Inc., Parsons, Kans.  
L.D. Scott, Tank Industry Consultants, Atascadero, Calif.  
G.R. Stein, Tank Industry Consultants, Indianapolis, Ind.  
J.D. Wicoff, Tank Connection, Rogers, Ark.  
A. Wilding, Permastore Ltd., Eye, Suffolk, England

The AWWA Standards Committee on Steel and Composite Water Storage Tanks, which reviewed and approved this standard, had the following personnel at the time of approval:

Gregory R. Stein, *Chair*

### *General Interest Members*

D.M. Algranti, Albert A. Webb Associates, Riverside, Calif.  
J.W. Birkhoff, Birkhoff, Hendricks & Carter LLP, Dallas, Tex.  
J.D. Brock, Consulting Services Logistics, Toledo, Ohio  
M.M. Coleman (*liaison, nonvoting*), Standards Council Liaison, Wade Trim Associates Inc., Detroit, Mich.  
E. Darrimon, Bay Area Coating Consultants Inc., Denair, Calif.  
W.J. Dixon, Dixon Engineering Inc., Lake Odessa, Mich.  
R.E. Gell, O'Brien & Gere Engineers Inc., Syracuse, N.Y.  
M.L. Hickey, Murraysmith, Portland, Ore.  
F.S. Kurtz (*liaison, nonvoting*), Standards Engineer Liaison, AWWA, Denver, Colo.  
R. Perez, Greeley and Hansen, Indianapolis, Ind.  
L.D. Scott (*alternate*), Tank Industry Consultants, Atascadero, Calif.  
G.R. Stein, Tank Industry Consultants, Indianapolis, Ind.  
J.I. Strand, CBS Squared Inc., Chippewa Falls, Wis.  
T.A. Tovey, Jacobs Engineering, Portland, Ore.

*Producer Members*

C. Brown (*alternate*), Tnemec Company Inc., Kansas City, Mo.  
G.A. Burke, Caldwell Tanks Inc., Louisville, Ky.  
W.J. Czaska, McDermott, Plainfield, Ill.  
J.W. Davis, Tesla NanoCoatings Inc., Massillon, Ohio  
K.T. Fuller, Phoenix Fabricators and Erectors LLC, Avon, Ind.  
J. Grendzinski (*alternate*), Landmark Structures, Wheaton, Ill.  
B.E. Kromer, Tank Builders Inc., Euless, Tex.  
K. McGuire, CST Industries Inc., Parsons, Kans.  
R.L. Moore, Tnemec Company Inc., Kansas City, Mo.  
R. Pawski, Landmark Structures, Wheaton, Ill.

*User Members*

J. Camarena, East Bay Municipal Utility District, Oakland, Calif.  
T.M. Dawson Jr., Emerald Coast Utilities Authority, Pensacola, Fla.  
M.F. Gaffey, Naval Facilities Expeditionary Warfare Center, Washington Navy Yard,  
Washington, D.C.  
N.J. Meder, Connecticut Water Co., Clinton, Conn.  
R.B. Potts, Louisville Water Company, Louisville, Ky.  
G. Terrell, Birmingham Water Works Board, Birmingham, Ala.  
C. Xiao, City of Phoenix Water Services Dept., Phoenix, Ariz.

# Contents

*All AWWA standards follow the general format indicated subsequently. Some variations from this format may be found in a particular standard.*

# Foreword

*This foreword is for information only and is not a part of ANSI/AWWA D103.*

## **I. Introduction.**

I.A. *Background.* This standard covers factory-coated bolted carbon steel tanks for water storage and is based on the accumulated knowledge and experience of manufacturers of bolted carbon steel tanks.<sup>†</sup>

I.B. *History.* The first version of this standard was prepared in cooperation with the Bolted Tank Manufacturer's Association and was issued in 1980. It was prepared in response to the increasing use of bolted tanks for water storage. [ANSI/AWWA D103-80](#) was later updated and approved as [ANSI/AWWA D103-87](#) on June 14, 1987.

Subsequent editions of ANSI/AWWA D103 were approved by the AWWA Board of Directors on June 15, 1997, and Jan. 25, 2009. This edition was approved on June 7, 2019.

I.C. *Acceptance.* In May 1985, the US Environmental Protection Agency (USEPA) entered into a cooperative agreement with a consortium led by NSF International (NSF) to develop voluntary third-party consensus standards and a certification program for direct and indirect drinking water additives. Other members of the original consortium included the Water Research Foundation (formerly AwwaRF) and the Conference of State Health and Environmental Managers (COSHEM). AWWA and the Association of State Drinking Water Administrators (ASDWA) joined later.

In the United States, authority to regulate products for use in, or in contact with, drinking water rests with individual states.<sup>‡</sup> Local agencies may choose to impose requirements more stringent than those required by the state. To evaluate the health effects of products and drinking water additives from such products, state and local agencies may use various references, including:

1. Specific policies of the state or local agency.
2. Two standards developed under the direction of NSF,<sup>§</sup> NSF/ANSI 60, Drinking Water Treatment Chemicals—Health Effects, and NSF/ANSI 61, Drinking Water System Components—Health Effects.

---

\* American National Standards Institute, 25 West 43<sup>rd</sup> Street, Fourth Floor, New York, NY 10036.

<sup>†</sup> The word *tanks* is used hereinafter broadly in place of the lengthy phrase *standpipes or reservoirs for water storage*.

<sup>‡</sup> Persons outside the United States should contact the appropriate authority having jurisdiction.

<sup>§</sup> NSF International, 789 North Dixboro Road, Ann Arbor, MI 48113.

3. Other references, including AWWA standards, *Food Chemicals Codex*, *Water Chemicals Codex*,<sup>\*</sup> and other standards considered appropriate by the state or local agency.

Various certification organizations may be involved in certifying products in accordance with NSF/ANSI 61. Individual states or local agencies have authority to accept or accredit certification organizations within their jurisdiction. Accreditation of certification organizations may vary from jurisdiction to jurisdiction.

Annex A, “Toxicology Review and Evaluation Procedures,” to NSF/ANSI 61 does not stipulate a maximum allowable level (MAL) of a contaminant for substances not regulated by a USEPA final maximum contaminant level (MCL). The MALs of an unspecified list of “unregulated contaminants” are based on toxicity testing guidelines (noncarcinogens) and risk characterization methodology (carcinogens). Use of Annex A procedures may not always be identical, depending on the certifier.

ANSI/AWWA D103 does not address additives requirements. Thus, users of this standard should consult the appropriate state or local agency having jurisdiction in order to:

1. Determine additives requirements, including applicable standards.
2. Determine the status of certifications by parties offering to certify products for contact with, or treatment of, drinking water.
3. Determine current information on product certification.

## **II. Special Issues.**

II.A. *Purchase.* When tanks are purchased using this standard, the purchaser must specify certain basic requirements. The purchaser may desire to modify, delete, or amplify sections of this standard to suit special conditions. It is strongly recommended that such modifications, deletions, or amplifications be made by supplementing this standard rather than by rewriting or incorporating sections from this standard into a separate specification.

II.B. *Design and Construction.* The details of design and construction covered by this standard are minimum requirements. A tank cannot be represented as adhering to the provisions of ANSI/AWWA D103 if it does not meet the minimum requirements of this standard.

II.C. *Coatings.* Tanks covered by this standard shall be supplied with factory-applied coatings. Field coating is limited to repair of damaged coatings.

---

<sup>\*</sup> Both publications available from National Academy of Sciences, 500 Fifth Street, NW, Washington, DC 20001.

Tanks with factory-applied coatings and bolted construction have a long life expectancy. Regular inspection and repair of damaged or deteriorated areas may be the determining factors in the length of tank life.

II.D. *Foundations.* Tank foundations are one of the more important aspects of tank design. Detailed requirements for tank foundations are covered in Section 13 of this standard. This standard does not require the manufacturer or constructor to be responsible for the design of the tank foundation unless specified. An adequate soil investigation at the tank site, including recommendations of the type of foundation to be used, the depth of foundation required, specification and compaction of sub-base materials, and the design soil-bearing pressure, should be obtained. This information, as well as specifications for an adequate soil investigation, should be established by a qualified geotechnical engineer. A drainage inlet structure or suitable erosion protection should be provided to receive the discharge from the tank overflow. The overflow should not be connected directly to a sewer or a storm drain without an air break.

II.E. *Annual Inspection, Maintenance, and Operation.* Annual inspection and maintenance is important if maximum tank life is to be attained. Complete interior and exterior inspections should occur at least every three to five years. In particular, accumulations of dirt and weeds from around the outside base of the tank, which may trap moisture and accelerate corrosion, as well as accumulated silt inside on the floor, should be removed. Refer to [AWWA Manual M42, Steel Water-Storage Tanks](#), for guidance concerning inspection and maintenance.

Sufficient water replacement and circulation is necessary to prevent freezing in the tank and piping. Where low usage may result in the possibility of freezing, the water may need to be wasted or heat provided to prevent freezing. The purchaser is referred to NFPA\* 22, Standard for Water Tanks for Private Fire Protection, for heater sizing. Purchasers are cautioned against allowing ice to build up for use as insulation because the ice may break loose and damage the tank.

II.F. *Disinfection Procedures.* This standard does not cover disinfecting procedures<sup>†</sup> (see Sec. 11.3). If the disinfecting is to be performed by the tank constructor, the purchaser must specify the disinfecting procedure to be used (see [ANSI/AWWA C652](#)).

---

\* National Fire Protection Association, 1 Batterymarch Park, Quincy, MA 02169.

<sup>†</sup> Various disinfection procedures are presented in [ANSI/AWWA C652](#), Disinfection of Water-Storage Facilities.
