

BSI Standards Publication

Biotechnology — Requirements for evaluating the performance of quantification methods for nucleic acid target sequences — qPCR and dPCR

National foreword

This British Standard is the UK implementation of ISO 20395:2019.

The UK participation in its preparation was entrusted to Technical Committee BTI/1, Biotechnologies.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Design of measurement procedure	8
4.1 General	8
4.2 Quantification method	8
4.2.1 General	8
4.2.2 qPCR determination of nucleic acid concentrations using a calibration curve	8
4.2.3 dPCR determination of copy number concentration using molecular counting	9
4.2.4 Relative quantification by qPCR	10
4.2.5 dPCR determination of ratio between two targets	11
4.3 Normalization strategy	11
4.4 Controls	12
5 Sample QC — Total nucleic acid quantity, integrity and purity	13
5.1 General	13
5.2 Total nucleic acid quantification	13
5.2.1 General	13
5.2.2 Spectrophotometry	14
5.2.3 Fluorometry	14
5.2.4 Assessment of total DNA concentration using qPCR/dPCR	14
5.3 Nucleic acid integrity	15
5.4 Nucleic acid purity	15
6 Assay design and optimization for quantification of nucleic acid target sequences	16
6.1 Assay design	16
6.1.1 General	16
6.1.2 Amplicon selection	16
6.1.3 Primer and probe design	16
6.1.4 In silico evaluation of specificity	16
6.1.5 RT-qPCR/RT-dPCR design	17
6.2 Assay optimization using purified samples	17
6.2.1 General	17
6.2.2 Optimization of fluorescence signal	17
6.2.3 (RT)-qPCR amplification efficiency	18
6.2.4 RT efficiency	18
6.2.5 Specificity	18
6.3 Method optimization using test samples	19
6.3.1 Effect of PCR inhibitors in sample matrix	19
6.3.2 Presence of nucleic acid contaminants in test sample	19
6.3.3 Validated measurement range	20
6.4 No template controls	20
7 Data quality control (QC) and analysis	20
7.1 General	20
7.2 Acceptance criteria	20
7.2.1 qPCR	20
7.2.2 dPCR	20
7.3 Threshold setting	21
7.3.1 qPCR	21
7.3.2 dPCR	21
7.4 Data pre-processing	21
7.4.1 qPCR using calibration curve	21

7.4.2	Relative quantification (qPCR)	21
7.5	Identification of outliers	22
8	Nucleic acid quantification measurement method validation	22
8.1	General	22
8.2	Precision	22
8.3	LOQ	23
8.4	LOD	23
8.5	Linearity	24
8.6	Trueness	24
8.7	Robustness	24
8.8	Specific considerations for qPCR method validation	25
8.8.1	Repeatability of qPCR- or RT-qPCR	25
8.8.2	Intermediate precision and reproducibility of qPCR- or RT-qPCR	25
8.9	Specific considerations for dPCR method validation	25
9	Nucleic acid quantification measurement traceability and comparability	25
9.1	Metrological traceability	25
9.2	Use of reference materials	26
9.3	Instrument calibration	26
10	Measurement uncertainty (MU) in qPCR and dPCR measurements	26
10.1	General requirements for MU calculations	26
10.2	qPCR measurement uncertainty	27
10.3	Ratio-based measurements	27
10.4	dPCR measurement uncertainty	27
11	Reporting	28
Annex A (informative) Spectrophotometry		29
Annex B (informative) Nucleic acid integrity		31
Annex C (informative) PCR efficiency		33
Annex D (informative) Measurement uncertainty		36
Annex E (informative) MIQE and dMIQE checklists		39
Bibliography		45

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 276, *Biotechnology*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
