### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

## CONTENTS

FOREWORD .....	7
INTRODUCTION .....	9
1 Scope .....	10
2 Normative references .....	11
3 Terms and definitions .....	13
4 Symbols and abbreviated terms .....	13
5 Principal elements .....	14
5.1 General .....	14
5.2 Design objectives .....	15
5.3 Technology assessment .....	15
5.4 Risk assessment .....	16
5.5 Safety levels .....	17
5.6 Basis of design .....	18
5.7 Environmental conditions .....	18
5.8 Life cycle considerations .....	18
5.9 Load definition and load combinations .....	18
5.10 Limit state design .....	19
5.11 Partial safety factors .....	19
5.12 Structural modelling and analysis .....	20
6 Environmental conditions .....	20
6.1 General .....	20
6.2 Primary environmental conditions .....	20
6.2.1 General .....	20
6.2.2 Waves .....	20
6.2.3 Sea currents .....	22
6.2.4 Water level .....	24
6.3 Secondary environmental conditions .....	25
6.3.1 General .....	25
6.3.2 Breaking waves .....	25
6.3.3 Breaking wave-induced surf currents .....	26
6.3.4 Wind conditions .....	26
6.3.5 Sea and river ice .....	26
6.3.6 Earthquakes and tsunamis .....	26
6.3.7 Marine growth .....	27
6.3.8 Seabed movement and scour .....	27
6.3.9 Other environmental conditions .....	27
7 Design load cases .....	27
7.1 General .....	27
7.2 Load categories .....	28
7.3 Design situations and load cases .....	29
7.3.1 General .....	29
7.3.2 Interaction with waves, currents, wind, water level and ice .....	30
7.3.3 Design categories and conditions .....	30
7.3.4 Limit states .....	31
7.3.5 Partial safety factors .....	32

7.3.6	Load case modelling and simulation .....	33
7.3.7	Design conditions .....	34
8	Materials .....	43
8.1	General.....	43
8.2	Material selection criteria .....	44
8.3	Environmental considerations .....	44
8.4	Structural materials.....	45
8.4.1	General .....	45
8.4.2	Metals .....	45
8.4.3	Concrete.....	46
8.4.4	Composites .....	46
8.5	Compatibility of materials.....	48
9	Structural integrity .....	48
9.1	General.....	48
9.2	Material models .....	48
9.3	Partial safety factors for materials.....	49
9.4	Design of steel structures .....	49
9.4.1	General .....	49
9.4.2	Steel partial safety factors .....	49
9.5	Design of concrete structures.....	50
9.5.1	General .....	50
9.5.2	Concrete material partial safety factors.....	50
9.5.3	Reinforcing steel.....	51
9.6	Design of composite structures .....	51
9.6.1	General .....	51
9.6.2	Composite material partial safety factors .....	51
9.6.3	Joints and interfaces.....	53
10	Electrical, mechanical, instrumentation and control systems .....	54
10.1	Overview.....	54
10.2	General requirements .....	54
10.3	Electrical.....	54
10.3.1	General .....	54
10.3.2	Electrical system design .....	55
10.3.3	Protective devices .....	55
10.3.4	Disconnect devices.....	55
10.3.5	Earth system .....	56
10.3.6	Lightning protection .....	56
10.3.7	Electrical cables .....	56
10.4	Mechanical .....	57
10.4.1	General .....	57
10.4.2	Bearings .....	57
10.4.3	Gearing .....	57
10.5	Piping systems.....	57
10.5.1	General .....	57
10.5.2	Bilge systems .....	57
10.5.3	Ballast systems .....	58
10.5.4	Hydraulic or pneumatic systems .....	58
10.6	Instrumentation and control system.....	58
10.6.1	General .....	58

10.6.2	Locking devices .....	58
10.6.3	Protection against unsafe operating conditions .....	58
10.7	Abnormal operating conditions safeguard .....	59
11	Mooring and foundation considerations .....	59
11.1	General .....	59
11.2	Unique challenges for wave energy converters .....	59
11.3	Unique challenges for tidal energy converters .....	59
11.4	Fixed structures .....	60
11.5	Compound MEC structures .....	60
12	Life cycle considerations .....	60
12.1	General .....	60
12.2	Planning .....	61
12.3	Stability and watertight integrity .....	61
12.3.1	General .....	61
12.3.2	Stability calculations .....	61
12.3.3	Watertight integrity and temporary closures .....	61
12.4	Assembly .....	61
12.4.1	General .....	61
12.4.2	Fasteners and attachments .....	61
12.4.3	Cranes, hoists and lifting equipment .....	62
12.5	Transportation .....	62
12.6	Commissioning .....	62
12.7	Metocean limits .....	63
12.8	Inspection .....	64
12.8.1	General .....	64
12.8.2	Coating inspection .....	64
12.8.3	Underwater inspection .....	64
12.9	Maintenance .....	64
12.9.1	General .....	64
12.9.2	Maintenance planning .....	64
12.9.3	Maintenance execution .....	65
12.10	Decommissioning .....	65
Annex A (normative)	Corrosion protection .....	66
A.1	General .....	66
A.2	Steel structures .....	66
A.2.1	General .....	66
A.2.2	Corrosion rates .....	67
A.2.3	Protective coatings .....	67
A.3	Cathodic protection .....	67
A.3.1	General .....	67
A.3.2	Closed compartments .....	68
A.3.3	Stainless steel .....	68
A.4	Concrete structures .....	68
A.4.1	General .....	68
A.4.2	Provision of adequate cover .....	69
A.4.3	Use of stainless steel or composite reinforcement .....	69
A.4.4	Cathodic protection of reinforcement .....	69
A.5	Non-ferrous metals .....	69
A.6	Composite structures .....	70

A.7	Compatibility of materials .....	70
Annex B	(normative) Operational and structural resonance .....	71
B.1	General .....	71
B.2	Control systems .....	71
B.3	Exciting frequencies .....	71
B.4	Natural frequencies .....	71
B.5	Analysis .....	72
B.6	Balancing of the rotating components .....	72
Annex C	(informative) Wave spectrum .....	73
C.1	Overview .....	73
C.2	The Pierson-Moskowitz spectrum .....	73
C.3	Relationship between peak and zero crossing periods .....	76
C.4	Wave directional spreading .....	76
Annex D	(informative) Shallow water hydrodynamics and breaking waves .....	78
D.1	Selection of suitable wave theories .....	78
D.2	Modelling of irregular wave trains .....	79
D.3	Breaking waves .....	79
Bibliography	.....	82
Figure 1	– Marine energy converter system boundary for IEC TS 62600-2 and interfaces .....	10
Figure 2	– Design process for a MEC .....	15
Figure 3	– Definition of water levels .....	25
Figure 4	– Process for determining design loads via load cases .....	28
Figure A.1	– Profile of the thickness loss resulting from corrosion of an unprotected steel structure in seawater (1 mil = 0,025 4 mm) .....	66
Figure C.1	– PM spectrum .....	74
Figure C.2	– JONSWAP and PM spectrums for typical North Sea storm sea state .....	75
Figure D.1	– Regions of applicability of stream functions, Stokes V, and linear wave theory .....	78
Figure D.2	– Breaking wave height dependent on still water depth .....	80
Figure D.3	– Transitions between different types of breaking waves as a function of seabed slope, wave height in deep waters and wave period .....	81

Table 15 – Values for adhesive joints, $\gamma_{mj}$ .....	54

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MARINE ENERGY –  
WAVE, TIDAL AND OTHER WATER CURRENT CONVERTERS –****Part 2: Marine energy systems – Design requirements**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a Technical Specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical Specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC TS 62600-2, which is a Technical Specification, has been prepared by IEC technical committee 114: Marine energy – Wave, tidal and other water current converters.

This second edition cancels and replaces the first edition published in 2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) The first edition published in 2016 was based on design methodologies developed by TC88. The second edition sets forth design conditions unique to marine energy converters.

The text of this Technical Specification is based on the following documents:

Enquiry draft	Report on voting
114/306/DTS	114/322/RVDTS

Full information on the voting for the approval of this Technical Specification can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62600 series, published under the general title *Marine energy – Wave, tidal and other water current converters*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- transformed into an International Standard,
- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**
