Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
3.1 Terms included in ISO 22300	1
3.2 Terms included in ISO 22301	3
3.3 Terms and definitions applicable to this Technical Specification	5
4 Why supply chain continuity is important	6
4.1 General	6
4.2 Describing the supply chain	6
4.3 Dynamics of supply chains	8
4.3.1 General	8
4.3.2 Supplier and contract lifecycle	8
4.3.3 Who owns the risk?	9
4.4 The essentials for SCCM	9
4.5 Benefits of effective SCCM	10
4.6 Challenges to effective SCCM	10
4.7 Key points of Clause 4 : Why supply chain continuity is important	11
5 Analysis of the supply chain	11
5.1 General	11
5.2 Considerations for analysing the supply chain	11
5.3 Define the approach	12
5.4 Structure of the analysis	12
5.5 Conducting the analysis	13
5.6 Output of analysis	14
5.7 Key points of Clause 5 : Analysis of the supply chain	14
6 SCCM strategies	15
6.1 General	15
6.2 Continuity strategy options	15
6.2.1 Option 1 — Accept status quo	15
6.2.2 Option 2 — Reduce dependency	15
6.2.3 Option 3 — Increase resilience	15
6.2.4 Option 4 — Work with the supplier	16
6.2.5 Option 5 — Ending the relationship	16
6.3 Including SCCM capability into a supply contract	16
6.4 Ownership of SCCM	17
6.5 Key points of Clause 6 : Considering options: developing strategies	17
7 Managing a disruption in the supply chain	17
7.1 General	17
7.2 Before an incident happens	18
7.3 Incident detection and notification	18
7.4 During an incident	18
7.5 Return to business as usual	19
7.6 Key points of Clause 7 : Managing a disruption in the supply chain	19
8 Performance evaluation	19
8.1 General	19
8.2 Engaging with suppliers	20
8.3 Implementing an SCCM performance evaluation programme	20
8.4 Maintaining the analysis	20
8.5 Outcomes of performance evaluation	21

8.6 Key points of [Clause 8](#): Performance management..... 21

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 292, *Security and resilience*.
