Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 46, *Information and documentation*, Subcommittee SC 11, *Archives/records management*.

This second edition cancels and replaces the first edition (ISO 30302:2015), which has been technically revised.

The main changes are as follows:

- alignment with the new edition of ISO 30301 (ISO 30301:2019);
- modification of [Annex A](#).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document has been developed to assist users to apply the management system for records requirements of ISO 30301. ISO 30301 specifies the requirements for a management system for records (MSR) where an organization needs to demonstrate its ability to create and control information created, received and maintained as evidence and as an asset by an organization, in pursuit of legal obligations or in the course of conducting business.

The purpose of this document is to provide practical guidance on how to implement a management system for records (MSR) within an organization in accordance with ISO 30301. This document covers what is needed to establish and maintain an MSR. This document does not modify and/or reduce the requirements specified in ISO 30301. An activity or documenting an activity is considered mandatory only when it is required in ISO 30301.

The implementation of an MSR is generally executed as a project. An MSR can be implemented in organizations with existing records systems or programmes to review and improve the management of those systems or programmes or in organizations planning to implement a systematic and verifiable approach to records creation and control for the first time. Guidance described in this document can be used in both situations. An MSR can be an advisable option for addressing legal or technological uncertainty in some cases.

It is assumed that organizations that decide to implement an MSR have made a preliminary assessment of their existing records and records systems and have identified risks to be addressed and opportunities for major improvements. For example, the decision to implement an MSR can be taken as a risk-reduction measure for undertaking a major information technology platform change or outsourcing business processes identified as high risk. Alternatively, the MSR can provide a standardized management framework for major improvements such as integrating records processes with specific business processes or improving control and management of records of online transactions or business use of social media.

The use of this document is necessarily flexible. It depends on the size, nature and complexity of the organization and the level of maturity of the MSR, if one is already in place. Each organization's context and complexity are unique and its specific contextual requirements will drive the MSR implementation. Smaller organizations will find that the activities described in this document can be simplified. Large or complex organizations can find that a layered management system is needed to implement and manage the activities in this document effectively.

Guidance in this document follows the same structure as ISO 30301, describing the activities to be undertaken to meet the requirements of ISO 30301 and how to document those activities.

[Clause 4](#) deals with how to perform the context analysis needed to implement an MSR. From this analysis, the scope of the MSR is defined and the relationship between implementing an MSR and other management systems is identified.

[Clause 5](#) explains leadership and how to gain the commitment of top management. The commitment is expressed in a records policy and the assignment of responsibilities and authorities.

[Clause 6](#) deals with planning the implementation of the MSR and adopting records objectives, which is informed by high-level risk analysis, the contextual analysis (see [Clause 4](#)), and the resources available (see [Clause 7](#)).

[Clause 7](#) outlines the support needed for the MSR, such as resources, competence, awareness, communication, and documented information.

[Clause 8](#) deals with defining or reviewing and planning the operational level. It includes the analysis to determine records to be created (see [8.2](#)) and the design and implementation of records processes, controls and systems. It draws on the contextual requirements and scope (see [Clause 4](#)) and is based on the records policy (see [5.2](#)), the risk analysis (see [6.1](#)) and resources needed (see [7.1](#)) to meet the records objectives (see [6.2](#)) in the planned implementation. [Clause 8](#) explains how to implement requirements in ISO 30301:2019, Annex A.
