8 Procedure	5
9 Calculation and expression of results	5
9.1 General	5
9.2 Determination of mid-point value	5
9.3 Calculation of mean result	5
9.4 Coating adhesion strength	6
10 Test report	6
Annex A (informative) Comments on interpretation of the autographic traces	11

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 4, *Products (other than hoses)*.

This fourth edition cancels and replaces the third edition (ISO 2411:2000), which has been technically revised.

The changes compared to the previous edition are as follows:

- a warning statement has been added before the scope;
- in [Clause 2](#), the publication year of ISO 2231 has been added;
- in [3.1](#), the definition of delamination has been modified;
- a new [Clause 4](#), specifying the atmosphere for conditioning and testing, has been added;
- in [Clause 6](#), the dimension of test specimen has been revised according to the addition of the test specimen of 20 mm width in [6.2](#) and [6.3.4](#);
- in both [6.3.1](#) and [6.3.3](#), a welding process has been added;
- in [6.2.3](#) and [6.3.1](#), notes have been changed to body text;
- in [Clause 7](#), Grade B and precision 1 have been changed to class B and class 1, respectively, according to the updated references;
- in [9.2](#), N/10 mm and N/20 mm have been added;
- in [Clause 10](#), items a), f), and l) have been added;
- in [Figure 3](#), x-axis and y-axis names have been added;
- in [Figure 4](#), figure subtitles have been added.
