

INTERNATIONAL STANDARD

ISO
1496-3

Fourth edition
1995-03-01

Series 1 freight containers — Specification and testing —

Part 3:

Tank containers for liquids, gases and
pressurized dry bulk

Conteneurs de la série 1 — Spécifications et essais —

*Partie 3: Conteneurs-citernes pour les liquides, les gaz et les produits
solides en vrac pressurisés*

Reference number
ISO 1496-3:1995(E)

5.6 Tank	5
5.7 Optional features	6
6 Testing	6
6.1 General	6
6.2 Test No. 1 — Stacking	7
6.3 Test No. 2 — Lifting from the four top corner fittings	8
6.4 Test No. 3 — Lifting from the four bottom corner fittings	8
6.5 Test No. 4 — External restraint (longitudinal)	9
6.6 Test No. 5 — Internal restraint (longitudinal)	9
6.7 Test No. 6 — Internal restraint (lateral)	10
6.8 Test No. 7 — Rigidity (transverse)	10
6.9 Test No. 8 — Rigidity (longitudinal)	11
6.10 Test No. 9 — Load-transfer area test	11

6.11	Test No. 10 — Walkways (where provided)	11
6.12	Test No. 11 — Ladders (where provided)	12
6.13	Test No. 12 — Pressure test	12
7	Identification and marking	12

Annexes

A	Diagrammatic representation of capabilities appropriate to all types and sizes of tank containers, except where otherwise stated	14
B	Details of requirements for load-transfer areas in base structures of containers	19
C	Dimensions of gooseneck tunnels (where provided)	23
D	Bibliography	24

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1496-3 was prepared by Technical Committee ISO/TC 104, *Freight containers*, Subcommittee SC 2, *Specific purpose containers*.

This fourth edition cancels and replaces the third edition (ISO 1496-3:1991), of which it constitutes a technical revision by the addition of types 1AAA and 1BBB as well as a load-transfer area test (see 6.10 and figure A.19) and by the suppression of grapple-arm lifting areas and attendant tests and requirements.

ISO 1496 consists of the following parts, under the general title *Series 1 freight containers — Specification and testing*:

- *Part 1: General cargo containers for general purposes*
- *Part 2: Thermal containers*
- *Part 3: Tank containers for liquids, gases and pressurized dry bulk*
- *Part 4: Non-pressurized containers for dry bulk*
- *Part 5: Platform and platform-based containers*

Annexes A, B and C form an integral part of this part of ISO 1496. Annex D is for information only.
