Contents

1 Scope	1
2 Normative references	1
3 Definitions	1
4 Fundamental requirements (for non-active and active ophthalmic instruments).....	2
5 Environmental conditions (for non-active and active ophthalmic instruments).....	3
6 Particular requirements for active ophthalmic instruments.....	5
7 Test methods.....	6
8 Information supplied by the manufacturer.....	10
Annex A (normative) Optical radiation hazard	11
Annex B (normative) Product-related International Standards for ophthalmic instruments	13
Annex C (informative) Photometric quantities	14
Annex D (informative) Example of information on the avoidance of overexposure to potentially hazardous optical radiation.....	16

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75% of the member bodies casting a vote.

International Standard ISO 15004 was prepared by ISO/TC 172, *Optics and optical instruments*, Subcommittee SC 7, *Ophthalmic optics and instruments*.

Annexes A and B form an integral part of this International Standard. Annexes C and D are for information only.
