

UL 60079-2

STANDARD FOR SAFETY

Explosive Atmospheres – Part 2:
Equipment Protection by Pressurized
Enclosure "p"

UL Standard for Safety for Explosive atmospheres – Part 2: Equipment protection by pressurized enclosure "p", UL 60079-2

Sixth Edition, Dated June 2, 2017

Summary of Topics

This revision of ANSI/UL 60079-2 dated September 15, 2021 is being issued to update the title page to reflect the reaffirmation of its ANSI approval. No changes in requirements have been made.

UL 60079-2 is an adoption of IEC 60079-2, Explosive Atmospheres – Part 2: Equipment Protection by Pressurized Enclosure "p" (Edition 6, issued by IEC July, 2014 including corrigendum 1:2015). Please note that the national difference document incorporates all of the U.S. national differences for UL 60079-2.

Text that has been changed in any manner or impacted by UL's electronic publishing system is marked with a vertical line in the margin.

The requirements are substantially in accordance with Proposal(s) on this subject dated June 25, 2021.

All rights reserved. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form by any means, electronic, mechanical photocopying, recording, or otherwise without prior permission of UL.

UL provides this Standard "as is" without warranty of any kind, either expressed or implied, including but not limited to, the implied warranties of merchantability or fitness for any purpose.

In no event will UL be liable for any special, incidental, consequential, indirect or similar damages, including loss of profits, lost savings, loss of data, or any other damages arising out of the use of or the inability to use this Standard, even if UL or an authorized UL representative has been advised of the possibility of such damage. In no event shall UL's liability for any damage ever exceed the price paid for this Standard, regardless of the form of the claim.

Users of the electronic versions of UL's Standards for Safety agree to defend, indemnify, and hold UL harmless from and against any loss, expense, liability, damage, claim, or judgment (including reasonable attorney's fees) resulting from any error or deviation introduced while purchaser is storing an electronic Standard on the purchaser's computer system.

UL 60079-2

Standard for Explosive atmospheres – Part 2: Equipment protection by pressurized enclosure "p"

First Edition – Not Printed
Second Edition – Not Printed
Third Edition – Not Printed
Fourth Edition – Not Printed
Fifth Edition – August, 2010

Sixth Edition

June 2, 2017

This ANSI/UL Standard for Safety consists of the Sixth Edition including revisions through September 15, 2021.

The most recent designation of ANSI/UL 60079-2 as a Reaffirmed American National Standard (ANS) occurred on September 15, 2021. ANSI approval for a standard does not include the Cover Page, Transmittal Pages, Title Page, or Preface. The National Difference Page and IEC Foreword are also excluded from the ANSI approval of IEC-based standards.

Comments or proposals for revisions on any part of the Standard may be submitted to UL at any time. Proposals should be submitted via a Proposal Request in UL's On-Line Collaborative Standards Development System (CSDS) at <https://csds.ul.com>.

UL's Standards for Safety are copyrighted by UL. Neither a printed nor electronic copy of a Standard should be altered in any way. All of UL's Standards and all copyrights, ownerships, and rights regarding those Standards shall remain the sole and exclusive property of UL.

Preface (UL)	7
National Differences	11
FOREWORD	13
INTRODUCTION	23
1 Scope	25
1DV Modification of Clause 1 to replace with the following:	25
2 Normative references	25
2DV Modification of Clause 2 references to replace with the following:	26
3 Terms and definitions.....	26
4 Protection levels.....	29
5 Constructional requirements for pressurized enclosures.....	31
5.1 Enclosure	31
5.2 Materials.....	31
5.3 Doors and covers	31
5.4 Mechanical strength.....	32
5.4DV.1 Modification of Clause 5.4, second paragraph to replace with the following	32
5.5 Group I and Group II Apertures, partitions, compartments and internal components	33
5.5.2DV Modification of Clause 5.5.2 to replace with the following:.....	33
5.6 Apertures for Static Pressurization	34
5.7 Insulating materials for Group I equipment.....	34
5.8 Sealing	34
5.9 Spark and particle barriers	34
5.9DV.1 Modification of Clause 5.9, fifth paragraph to replace with the following	34
5.10 Cells and batteries	34
6 Temperature limits.....	35
6.1 General	35
6.2 For Level of Protection “pxb” or Level of Protection “pyb”	35
6.2DV Modification of Clause 6.2 to replace with the following:	35
6.3 For Level of Protection “pzc”.....	35
7 Safety provisions and safety devices (except for static pressurization).....	36
7.1 Suitability of safety devices for hazardous area	36
7.1DV Modification of Clause 7.1 to replace with the following:	36
7.2 Integrity of safety devices	36
7.3 Provider of safety devices	36
7.3DV Modification of Clause 7.3, to replace with the following:	36
7.4 Pressurization System evaluated as associated equipment	37
7.5 Sequence diagram for Level of Protection “pxb”	38
7.6 Ratings for safety devices	38
7.7 Group I and Group II Purging automated for Level of Protection “pxb”	38
7.8 Group I or Group II – Purging criteria.....	38
7.9 Group III – Cleaning.....	39
7.10 Requirements when a minimum flow rate required	39
7.11 Safety devices to detect minimum overpressure	39
7.11DV.1 Modification of Clause 7.11, first paragraph (item 9 of d) to delete text, it does not apply:	40
7.12 Value of minimum overpressure	41
7.13 Pressurizing multiple enclosures.....	41
7.14 Safety devices on doors and covers	41
7.15 Equipment that may remain energized	41

7.16	Equipment permitted within Level of Protection “pyb”	42
8	Safety provisions and safety devices for static pressurization	42
8.1	Suitability of safety devices for hazardous area	42
8.2	Protective gas	42
8.3	Internal sources of release	42
8.4	Group I and Group II Filling procedure	42
8.5	Group III Filling Procedure	42
8.6	Safety devices	42
8.7	Equipment that may remain energized	43
8.8	Overpressure	43
9	Supply of protective gas	43
9.1	Backup supply	43
9.2	Independent supplies	43
9.3	Type of gas	43
9.4	Temperature	43
10	Pressurized equipment with an internal source of release	43
11	Release conditions	44
11.1	No release	44
11.1.2DV.1	Modification of Clause 11.1.1, second paragraph to replace with the following: ...	44
11.2	Limited release of a gas or vapour	44
11.3	Limited release of a liquid	44
12	Design requirements for the containment system	44
12.1	General design requirements	44
12.2	Infallible containment system	45
12.3	Containment system with a limited release	45
12.3DV.1	Modification of Clause 12.3, fourth paragraph to replace with the following:	46
13	Protective gas and pressurizing techniques when there is an internal source of release	46
13.1	General	46
13.2	Pressurization with leakage compensation	47
13.3	Pressurization with dilution	47
14	Ignition-capable equipment	48
15	Internal hot surfaces	48
16	Type verification and tests	49
16.1	Determining the maximum overpressure rating	49
16.2	Maximum overpressure test	49
16.3	Leakage test	49
16.4	Purging test for pressurized enclosures with no internal source of release and filling procedure test for static pressurization	49
16.5	Purging and dilution tests for a pressurized enclosure with an internal source of release	50
16.6	Verification of minimum overpressure	52
16.7	Tests for an infallible containment system	53
16.8	Overpressure test for a containment system with a limited release	53
17	Routine tests	53
17.1	Functional test	53
17.2	Leakage test	53
17.3	Tests for an infallible containment system	53
17.4	Test for a containment system with a limited release	54
18	Marking	54
18.1	General	54
18.2	Identifying as pressurized	54
18.3	Supplementary marking	54
18.3DV.1	Modification of Clause 18.3, item a) to include permissible substitute marking for the level of protection marking for Group III with the following:	54
18.4	Internal source of release	55
18.5	Static pressurization	55

18.6 Pressurization systems	55
18.6DV.1 Modification of Clause 18.6, NOTES to replace with the following:	56
18.7 Warnings required in other clauses	56
18.8 Overpressure limited by user	56
18.9 Inert gas	57
19 Instructions	57

Annex A (normative) Purging and dilution tests

A.1 General	58
A.2 Criteria for compliance where the protective gas is air	58
A.3 Criteria for compliance where the protective gas is inert	58

Annex B (informative) Examples of functional sequence diagram

Annex C (informative) Examples of the changes in pressure in ducts and enclosures

Annex D (informative) Information to be provided to the user

D.1 General	69
D.2 Ducting of protective gas	69
D.2.1 Location of inlet	69
D.2.2 Ducting between pressurized enclosure and inlet	69
D.2.3 Outlets for protective gas	69
D.2.4 Additional purge time to account for ducting	70
D.2.5 Temperature of protective gas at the inlet	70
D.3 Power for protective gas supply	70
D.4 Static pressurization	70
D.5 Enclosures with a containment system	70
D.6 Enclosure maximum overpressure	70

Annex E (normative) Classification of the type of release within enclosures

E.1 General	71
E.2 No normal release, no abnormal release	71
E.3 No normal release, limited abnormal release	71
E.4 Limited normal release	71

Annex F (informative) Examples for the use of the dilution area concept

Annex G (normative) Internal Cells and Batteries for Level of Protection “pxb” and Level of Protection “pyb”

G.1 General Requirements	75
G.1.1 General	75
G.1.2 Accepted Electrochemical Systems	75
G.1.3 Secondary cells and secondary batteries	75
G.1.4 Mechanical Protection	75
G.2 Electrical Protection by energy limiting circuits.	75
G.2.1 Assessing as energy limited	75
G.2.2 Protective Components	76

	Annex G.2.2DV.1 Modification of Clause G.2.2, second paragraph to replace with the following:	76
	G.2.3 Preventing excessive gas pressure	77
G.3	Additional requirements for Primary batteries	77
	G.3.1 Prevention of reverse charging	77
	G.3.2 Prevention of accidental charging of primary batteries	78
G.4	Additional requirements for secondary batteries	78
	G.4.1 Charging of secondary batteries inside the pressurized housing	78
G.5	Specific requirements for Inherently Safe (IhS) cells and batteries	79
	Annex G.5DV.1 Modification of Clause G.5, first paragraph to replace with the following:	79
	Annex G.5.2 Modification of Clause G.5, third paragraph to replace with the following:	79
G.6	Equipment located inside a pressurized enclosure connected to a battery which is also located inside the pressurized enclosure and not disconnected in the event of loss of pressurization ..	79
	G.6.1 General	79
	G.6.2 Circuit Isolation	80
	G.6.3 Intrinsically safe battery or inherently safe battery used with "Ex" equipment	80
	G.6.4 Intrinsically Safe or Inherently Safe battery with non-"Ex" equipment	80
G.7	Supplementary marking and constructional requirements for pressurized enclosures containing one or more cells or batteries	82
	G.7.1 General	82
	G.7.2 Battery removal warning	82
	G.7.3 Batteries requiring routine maintenance	82
G.8	Type tests	82
	G.8.1 Voltage	82
	G.8.2 Short circuit test for an Inherently Safe Cell or Battery	82
	G.8.3 Full load test for other than Inherently safe batteries	82

Annex H (normative) Internal Cells and Batteries for Level of Protection "pzc"

H.1	General Requirements	83
	H.1.1 General	83
	H.1.2 Accepted Electrochemical Systems	83
	H.1.3 Secondary cells and secondary batteries	83
	H.1.4 Mechanical Protection	83
H.2	Equipment located inside a pressurized enclosure connected to a battery which is also located inside the pressurized enclosure and is not disconnected when power is removed from the enclosure	83
	Annex H.2DV Modification of Clause H.2 to replace with the following:	83
H.3	Supplementary marking and constructional requirements for pressurized enclosures containing one or more cells or batteries	84
	H.3.1 General	84
	H.3.2 Battery removal warning	84
	H.3.3 Batteries requiring routine maintenance	84
