

UL 10A

STANDARD FOR SAFETY

Tin-Clad Fire Doors

UL Standard for Safety for Tin-Clad Fire Doors, UL 10A

Twenty First Edition, Dated January 30, 2009

Summary of Topics

This revision to ANSI/UL 10A is being issued to update the title page to reflect the reaffirmation of ANSI approval. No changes in requirements are involved.

All rights reserved. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form by any means, electronic, mechanical photocopying, recording, or otherwise without prior permission of UL.

UL provides this Standard "as is" without warranty of any kind, either expressed or implied, including but not limited to, the implied warranties of merchantability or fitness for any purpose.

In no event will UL be liable for any special, incidental, consequential, indirect or similar damages, including loss of profits, lost savings, loss of data, or any other damages arising out of the use of or the inability to use this Standard, even if UL or an authorized UL representative has been advised of the possibility of such damage. In no event shall UL's liability for any damage ever exceed the price paid for this Standard, regardless of the form of the claim.

Users of the electronic versions of UL's Standards for Safety agree to defend, indemnify, and hold UL harmless from and against any loss, expense, liability, damage, claim, or judgment (including reasonable attorney's fees) resulting from any error or deviation introduced while purchaser is storing an electronic Standard on the purchaser's computer system.

ANSI/UL 10A-2009 (R2018)

HISTORICAL NOTE

The title "Tin-Clad Fire Doors" is historically related to two- or three-ply wooden core construction covered with sheet steel as thin as 0.01 in (0.25 mm) coated with "roofing grade"terne "plate" having a composition of 20 percent tin and 80 percent lead. More recently the title has been retained as also applying to identical construction except for the substitution of zinc coating for terne coating with the provision that zinc coated metal should be painted with a good grade of corrosion resisting paint prior to shipment.

The maximum metal section (plate) size of 14 by 20 in (356 by 508 mm) is dictated by the original concept that the extremely thin base metal was to be secured only by nails having their heads covered by fold-over laps and the need for the resultant seams to be spaced sufficiently close as to prevent bulging or surface distortions.

The original title has been retained to relate to the basic concept for this class of construction in trade usage, as is so referenced in several national and other building codes, as well as in the current edition of the Standard for Fire Doors and Other Opening Protectives, NFPA No. 80.

This edition has been edited to delete use of the word "plate" as the present trade usage of this term relates to hot-rolled steel having a thickness of at least 0.230 in (5.8 mm).

UL 10A

Standard for Tin-Clad Fire Doors

Previous numbered and unnumbered editions of standards covering this material have been published since 1903.

Tenth Edition – August, 1935
Eleventh Edition – July, 1937
Twelfth Edition – December, 1941
Thirteenth Edition – March, 1949
Fourteenth Edition – July, 1951
Fifteenth Edition – January, 1956
Sixteenth Edition – December, 1968
Seventeenth Edition – December, 1973
Eighteenth Edition – February, 1980
Nineteenth Edition – February, 1993
Twentieth Edition – February, 1998

Twenty-First Edition

January 30, 2009

This ANSI/UL Standard for Safety consists of the Twenty-First Edition, including revisions through July 20, 2018.

[This is a preview. Click here to purchase the full publication.](#)

The most recent designation of ANSI/UL 10A as a Reaffirmed American National Standard (ANS) occurred on July 20, 2018. ANSI approval for a standard does not include the Cover Page, Transmittal Pages, and Title Page.

The Department of Defense (DoD) has adopted UL 10A on October 21, 1984. The publication of revised pages or a new edition of this Standard will not invalidate the DoD adoption.

Comments or proposals for revisions on any part of the Standard may be submitted to UL at any time. Proposals should be submitted via a Proposal Request in UL's On-Line Collaborative Standards Development System (CSDS) at <https://csds.ul.com>.

UL's Standards for Safety are copyrighted by UL. Neither a printed nor electronic copy of a Standard should be altered in any way. All of UL's Standards and all copyrights, ownerships, and rights regarding those Standards shall remain the sole and exclusive property of UL.

CONTENTS

INTRODUCTION

1 Scope	5
2 General	6
2.1 Sizes and ratings	6
2.2 Units of measurement	6
2.3 Undated references	6

MATERIALS

3 Lumber	7
4 Metal Coverings	11
4.1 General	11
4.2 Terne coated sheet steel	11
4.3 Zinc coated (galvanized) sheet steel	11
5 Nails	12

CONSTRUCTION

6 Assembly of Boards	12
7 Nailing of Cores	15
7.1 General	15
7.2 Two-ply and three-ply cores of boards 3 to 4 inches (inclusive) stock width	16
7.3 Two-ply and three-ply cores of boards 4-1/2 to 8 inches (inclusive) stock width	19
7.4 Three-ply cores only of boards 4-1/2 to 8 inches (inclusive) stock width	19
8 Finished Cores	23
9 Sizes of Steel Sections	23
10 Forming of Steel Sections	23
11 Application of Steel Sections	28
12 Nailing of Steel Sections	31
13 Protection of Nail Heads	32
14 Astragals	32
15 Glass Panels	33
15.1 General	33
15.2 Reinforcements for grooves	33
15.3 Grooves constructed of angles	33
15.4 Grooves constructed of formed sheet metal	33
15.5 Muntins	39
15.6 Screws and rivets	40
15.7 Glass sizes	40
16 Splicing of Doors Made in Sections	40
17 Wickets	41
18 Applied Metals	41
